Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the prior art does not teach or render obvious a printer operable in a duplex print mode for printing an image on one side of a sheet-like recording medium and then printing an image on the other side of said sheet-like recording medium, said printer comprising wherein the roller comprises an elastic roller having an adhesive surface while the elastic roller comprises rubber and is caused to rotate by the press roller, and wherein the press roller comprises, when configured to press the other side of the recording medium against the print drum, an elastic body having a fluorine compound layer on a surface thereof, the fluorine compound layer including a film tube closely fitted on the surface of said elastic body.

Regarding claim 12, the prior art does not teach or render obvious a printer operable in a duplex print mode wherein an elastic roller having an adhesive surface while the elastic roller comprises rubber and is caused to rotate by the press roller and wherein the press roller comprises, when configured to press the other side of the recording medium against the print drum, an elastic body having a fluorine compound layer on a surface thereof, the fluorine compound layer including a film tube closely fitted on the surface of said elastic body.

Regarding claims 106 and 112, the prior art does not teach or render obvious a printer operable in a duplex print mode for printing an image on one side of a sheet-like recording medium and then printing, within 3 seconds, an image on the other side of the

sheet-like recording medium, the printer comprising wherein the press roller comprises, when configured to press the other side of the sheet-like recording medium against the print drum, a surface formed with a number of projections, each having a peak provided with a radius of 0.04 mm or below, at a mean pitch of 0.4 mm or below, and wherein the projections are formed on an elongate sheet member having a preselected width and spirally wrapped around the surface of said press roller.

Regarding claims 124 and 130, the prior art does not teach or render obvious a printer operable in a duplex print mode for printing an image on one side of a sheet-like recording medium and then printing, within 3 seconds, an image on the other side of the sheet-like recording medium, the printer comprising a surface including a stepped portion formed by a number of spherical bodies, each having a radius of 0.1 mm or below, arranged with a maximum difference in height of 0.03 mm or above and a mean pitch of 0.15 mm or above between nearby highest peaks.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
